

Health Systems Strengthening

Health Systems Strengthening

Systems built to last, led locally.

We strengthen the workforce, governance, and data systems that hold health programs together — from workforce optimization and institutional strengthening to sustainability planning and government ownership of health information systems.

HIV

Person-centered care, from testing to treatment.

We accelerate case finding and treatment linkage, strengthen treatment continuity through differentiated service delivery, and improve viral load coverage — closing gaps in pediatric, adolescent, and key population programming.

Tuberculosis (TB)

Faster detection. Stronger systems. Better outcomes.

We integrate TB screening and rapid treatment initiation into facility service points, strengthen lab systems for molecular testing, and build community testing and data management capacity to reduce mortality.

Malaria

Combining prevention, surveillance, and community action.

We strengthen facility and community case management, expand integrated Community Case Management (iCCM), and reinforce combination prevention efforts to reduce transmission, anemia, and child mortality.

Maternal & Child Health (RMNCAHN)

Quality care for mothers, newborns, children, and adolescents.

We expand health facility coverage, build workforce capacity through mentorship, and intensify community engagement — supporting antenatal care, skilled delivery, and immunization — while embedding continuous quality improvement into everyday practice.

Technical Services

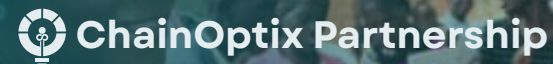

Program excellence, start to finish.

End-to-end program management, policy and strategy development, institutional strengthening, capacity building, monitoring & evaluation, and change management — delivered by a team with decades of frontline experience.

Supply Chain

Product security, from forecasting to last mile.

We secure the supply chain end to end — quantification and forecasting, procurement support, warehousing and distribution, LMIS, and last-mile delivery innovation — so the right products reach the right place at the right time.

CAPABILITY STATEMENT

A multidisciplinary development partnership delivering practical, locally driven solutions across the full spectrum of development portfolios.

Development Solutions.
Rooted in Local Action.

Distribution Network Optimization

Smarter networks. Faster, more reliable delivery.

Last-Mile Delivery Innovation

Reaching the last mile — reliably and at scale.

GS1 Track & Traceability Solutions

Full accountability, from source to patient.

Operations Management

Warehousing and distribution that works.

Supply Chain Services

Supply Chain Maturity Assessments

Know where you stand. Know where to go.

Forecasting & Quantification

The right quantities, at the right time.

Commodity Procurement Support

Transparent procurement, every step of the way.

Logistics Management Information Systems (LMIS)

Visibility across your entire supply chain.

Business Advisory Services

Operations Management

Efficient operations. Resilient programs.

Internal controls, procurement, HR, and financial management systems that support smooth, compliant delivery.

Resource Management

Your people, your greatest asset.

We design systems that attract, retain, and develop top talent, from recruitment to performance management.

Accountable, Transparent Leadership

Governance that earns and keeps trust.

Frameworks that guide ethical leadership, oversight, and accountability.

Contracts & Grants Administration

Compliant, transparent, and built to last.

End-to-end contracting and grants support for donor-funded programs.
